SESSION 26 / ANALYSIS REPORT

Facebook Metrics - findings

- Source file: dataset_Facebook.csv
- Raw rows: 500; cleaned rows: 500.
- Complete engagement outcomes: 496.
- Median engagement: 125.00; mean: 213.78.
- Leading post type by median engagement: Video: median 271.00 interactions, 7 observed posts.
- Leading category: 3.0: median 163.00 interactions, 155 observed posts.
- Leading posting-hour code: 13.0: median 155.50 interactions, 52 observed posts.

Recommended actions

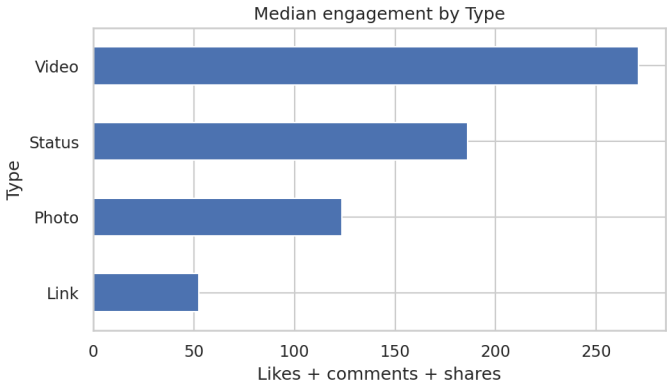

Trial the leading content types and categories while comparing reach-normalized engagement and group sizes. Test posting hours across repeated weeks rather than treating a historical peak as a universal best time. Evaluate paid and organic distribution separately where available.

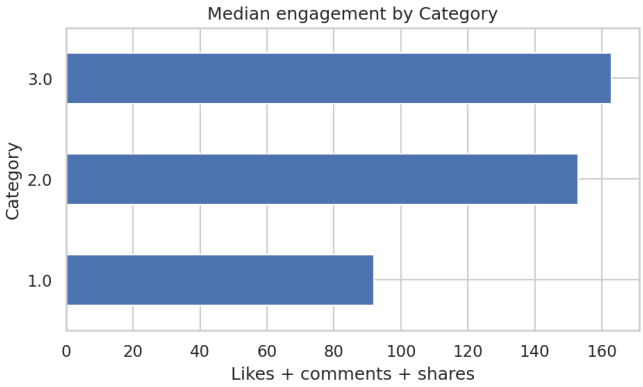

Limitations

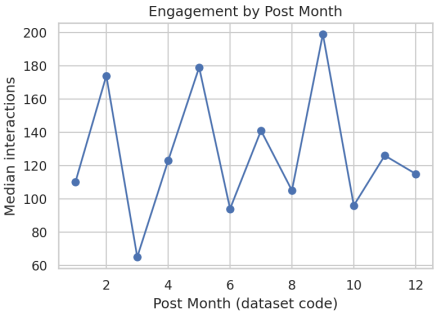

Observational data; category and weekday meanings must be checked against the source documentation. Missing interactions are not zero. Timing, reach, paid distribution and content type may be confounded. These results describe this dataset, not current Facebook performance.

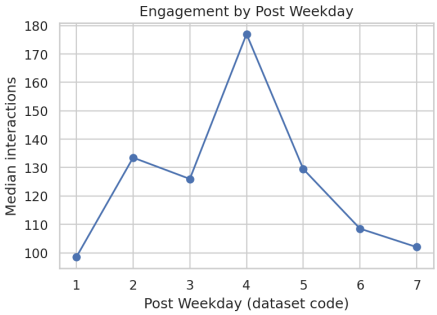

Evidence: figures on the following pages; numerical tables and source links accompany this PDF in the repository. Dataset download date: 2026-11-06.
